

Layup ply schedules:

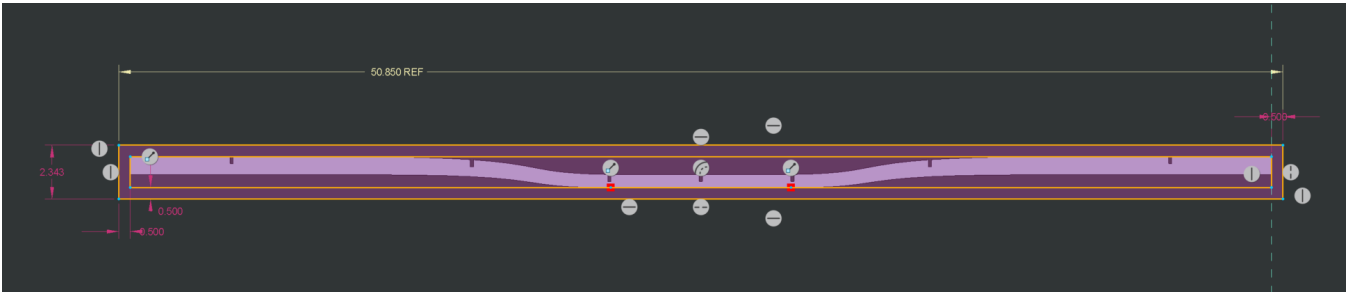

Cutting Dimensions

Spars:

Spar in mp 1: 5x (52"x2.5") TC275

Spar in mp 2: 5x (52"x2.5")

Can we lay both spars on a single sheet? considering there's a 1" margin to border of lay up and 0.25" between nested parts.

Nesting

Status: completed (no improvement possible)

Sheets	1	Nested parts	2 / 2	Scrap	67.56%
Sheets area	0 m ²	Nested mass	100%	Result time	0.1s

52 x 4.5

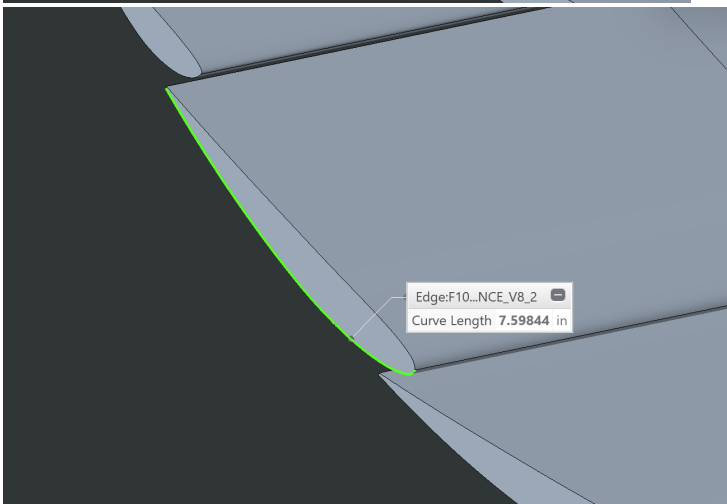

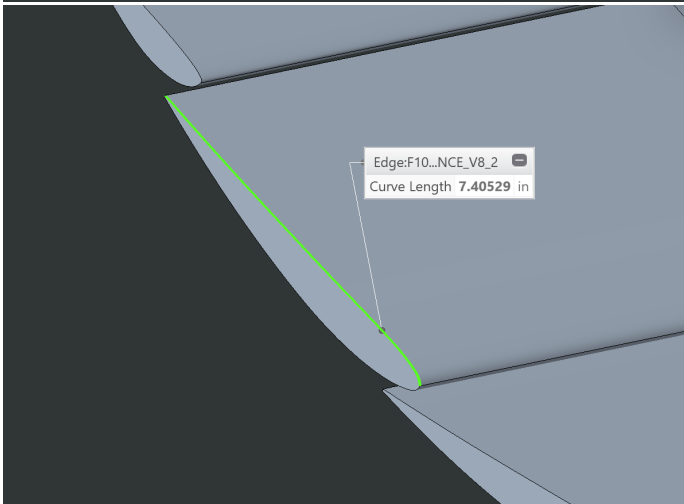

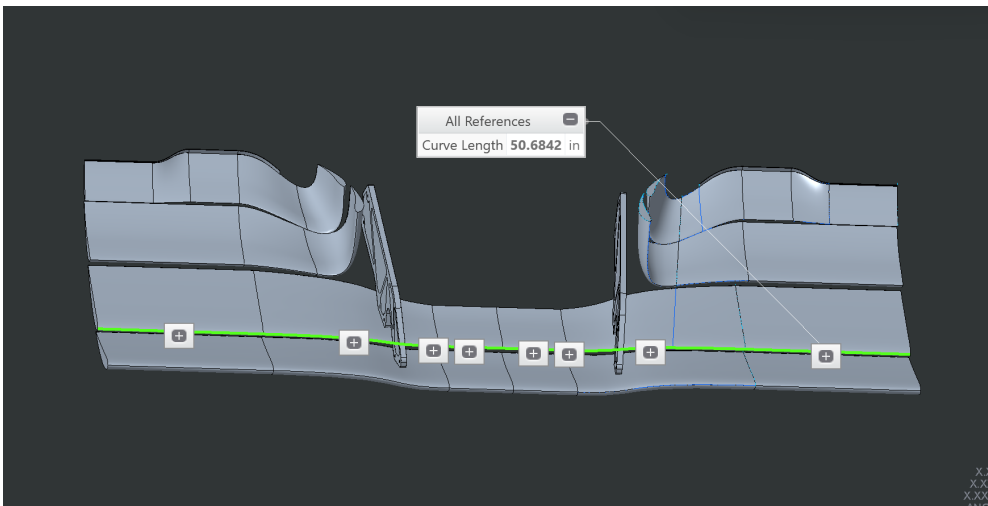

Scrap 67.56%

Mainplanes:

MP1: Upper: 2x (52"x9") Lower: 2x (52"x9"): 3K AS4C

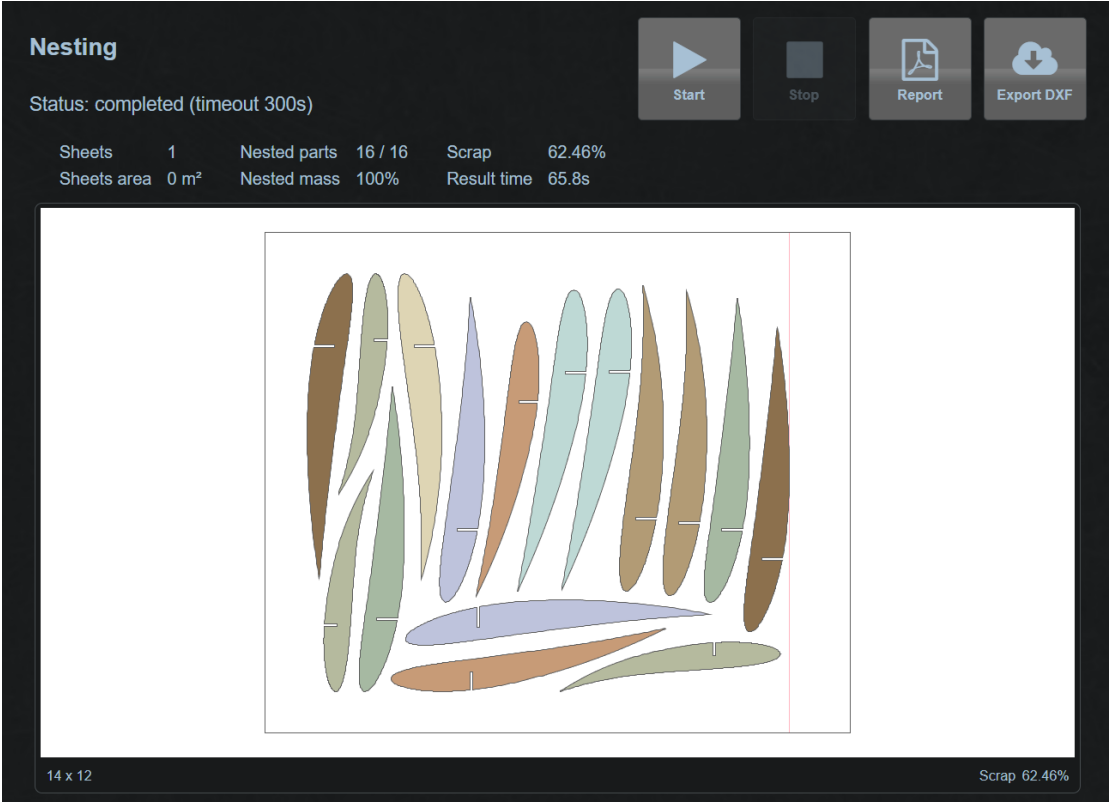

mp2:Upper: 2x (52"x9") Lower: 2x (52"x9"): 3K AS4C

Ribs

All ribs are 1c1 0.125" core and were sized w BT250 so either TC250 or TC275 should work. Same limits as spar nesting setup. We've got a little room along the length but it might come handy incase of screw ups.

Strut Covers:

We need a single ply on each side of each strut to cover the pockets for aero. Simple.
